

Generation Y Student Data Text Fields

Partner Teacher Follow-Up Survey

How has your experience with Generation Y changed the way you think or feel about school and students?

District: Albany Diocese School District

School: St. Mary's Academy

I find the students to be very capable and knowledgeable.

District: Ashland School District

School: Ashland Middle School

Gen-Y has affirmed for me a belief that students can rise to the level of expectations we (teachers) hold for them. And now we can hold higher expectations with regard to computer technology.

Some students excel when given the opportunity to use a tool (computers) they are comfortable with.

I think that students who use the opportunity to incorporate technology will benefit greatly.

I re-read that I was a student and not just a teacher. It was exciting to be a student.

Some students excel when given the opportunity to use a tool (computers) they are comfortable with.

Yes; liked the option of utilizing students' knowledge to accent my instruction; would like to utilize program again with student who has completed my class.

Yes, I've realized we need more view Sonics.

It really hasn't changed that much; it just reconfirmed what I already knew, which was that students can be responsible and have great knowledge to share with adults if we give them a chance.

District: Bayfield School District

School: Bayfield School

District: Bayfield School District

School: Bayfield School

Students worked well together with the technology. Having a student allowed me to use software that I was not familiar with.

I was very impressed with the level of fortitude Jesse showed in sticking with this project. Between the two of us we did over twenty hours of video taping and editing. He was very devoted to the project.

It has reinforced the idea that students will work hard if they are interested in the subject matter.

District: Bering Strait School District

School: Tri Valley School

I think it is an excellent program, based on my observations of other projects. I was a long-term substitute teacher who missed the initial training for the project. I was much too busy to take on this project. My partner student was not very motivated to start or complete the project.

It was a good experience that I am sure will continue on next year in one form or another. As a gen-y partner teacher and as a gen-y teacher I got the full experience and it was great.

I have seen some real improvement in the attitudes of students who have gone through the Gen www.Y program. I hope they continue to feel like the experts they have become.

I believe that computer technology can be used to help motivate some students. More so in the lower grades than the high school.

I really like the idea of Gen Y students have the skills to assist with the technology. As a teacher I don't always have time to sit down and learn all there is to know about a new software program or piece of equipment. It was great to have student be able to assist with the learning and then passing on that information to classes. It also seemed to make the Gen Y student feel more a part of the learning process.

I have found that technology can be motivating for some but not others.

I was surprised how positively the younger students responded to the leadership of the older students.

I have been very impressed with the knowledge acquired by the students and the level of their work in the classroom.

That technology and computers can be a strong mitivator for some students but not others

District: Bering Strait School District

School: Tri Valley School

It helped me see the benefits of one-on-one special relationships with students, and how the positive influence of an older student can help younger students.

My experience with Generation www.Y has shown me that technology helps students build confidence in their abilities. It has also shown me that providing the opportunity for students to be teachers has a positive effect on their attitude toward learning.

District: Bethel School District

School: Spannaway Junior High School

YES!!! STUDENTS ARE GREAT AT TEACHING COMPUTER GENERATED LESSONS.

I see the way kids get jazzed about the technology and like being around that level of excitement.

It was great designing a project and having students do it. We will do the fine tuning second semester, then use the finished product to show all incoming 7th graders every year.

Technology is becoming integrated to the point that students are choosing where and how it fits. I like that a lot!

I was pleasantly surprised at the quality of the work. It is a unit that I will be able to use in the future, long after Angela has moved on to the high school.

Technology is becoming the most important tool we have in the process of education.

District: Calloway County School District

School: Calloway County Middle School

Yes. I've learned more about computers from the Gen Y program.

Yes Working with Gen Y students has been a very rewarding one. My students are often the teachers.

Students are a very valuable resource in coming up with creative uses for technology in the classroom

District: Calloway County School District

School: Calloway County Middle School

none

District: Canev Valley USD 436

School: Lincoln Memorial Elementary School

I firmly believe that students do a very good job learning about and putting to practical use their computer knowledge. Students have no fear of computers and do not hold back at all. Adults of my generation sometimes hold back.

Students enjoy learning in different ways. The internet is a very useful tool for teaching and learning.

I think gen-y was great for the kids who participated. It was interesting to see the changes that Tori made through out the year. She became more confident, and it is a program that I would like to see continued.

I feel that technology can be just as effective a tool in the lower elementary class as it is with the older students.

District: Cincinnati Public Schools

School: Crest Hills Elementary School

It has not changed the way I feel about supporting a student's pursuit of his interests, but it has pointed the way to support him in pursuing his research of those interests, and developing a product to share with others.

The experience has helped my appreciation for student-based learning. I saw that because of Gen-Y students felt more comfortable and confident in learning. This was ensured by watching these students take lead roles in projects and assignments from the classes, in which they were eager to help peers and teachers in some cases use to the technology to aid in completing assignments and creating lessons.

It has not changed the way I feel about supporting a student's pursuit of his interests, but it has pointed the way to support him in pursuing his research of those interests, and developing a product to share with others.

I believe that are more apt to learning when using technology. It gave them a added enhancement to learning new things and learning in general. I saw Gen-Y students take a more significant role in leadership and group activities as it relates to leaning.

I feel it has allowed me to gain more insight and knowledge, along with Kelvin and the other students in the gen-y class. I learned some things from them as well. I have always tried to be open minded in dealing with the students and felt, we helped one another with this project.

School: Hughes Center High School

District: Cincinnati Public Schools

School: Hughes Center High School

Not appreciably.

I was amazed at how talented and comfortable GenY students were with the technology and navigation of the computer. Students were very skillful in teaching the teachers how to use I-Movie and have been a constant source of technical support through the editing process.

The name of the program is Teaching & Technology. It's why I transferred into the program. GenY reinforced the fact that I made the right decision. GenY provides the perfect platform to create a learning synergy between teachers and students.

Not much.

District: Dearborn Heights Sch Dist 7

School: Bedford Elementary School

It has not changed. I always use computers in my classroom and teach powerpoint presentations.

I now and did think students could help with the teaching of a subject.

i ENJOYED WORKING WITH AN OLDER STUDENT ON THIS PROJECT.

I feel that we are not making use of the vast ability the students possess with regards to technology. GenY is a step in the right direction.

School: Madison School

I am amazed at the level of understanding some of my students exhibited with the computer. They were able to help me in some situations where I was stumped.

I think that this program gives the students a positive outlet for their technology abilities and knowledge. It's a great way to bring the teachers and students together to bring technology into the classroom.

the children really enjoyed seeing what they learn from paper on the computer

District: Dearborn Heights Sch Dist 7

School: Madison School

It's amazing to see the level of interest that the 5th grade Gen Y students had in helping us! I think it was beneficial to both of us - a self-esteem builder for the student and a time saver for me!!It was a great experience!

I liked having someone to figure out my questions. I was more willing to try things out when I knew there was someone to fix my mistakes.

I was very impressed with Tina's effort with this project. She was understandably nervous before teaching my class, but she worked with the kids very well. Not only was the material difficult to teach, but the classes had behavior problems that added to the difficulty. Tina handled everything with poise and continued to teach throughout. Working with Tina made me realize that our students are much more capable than I first realized.

Yes, it made me realize that students can be a great resource.

School: Pardee Elementary School

It had little educational or personal impact.

There has been little change in my thoughts.

I think what the Gen Y students are doing is great. Although, I have not had much contact with my Gen Y student I can see the improvement overall with the Gen Y students in my computer classes. The Gen Y students, in general, are more confident working on their own and have a higher quality of work than their classmates.

I think that it helped the students understand the difficulty of planning and implementing lessons.

I am very comfortable with technology and I want my students to be that way also. I think this is a great project. I loved working with Lisa. I am glad that she learned a lot as she made this presentation.

I learned that it takes more time than I originally thought to teach these gen Y students basic computer skills. I now realize that I was expecting something very different than what I got, and I will use this experience to help my future gen y student. I will try to give more guidance and check on progress more often.

As a secretary I have experienced how helpful students can be using the computer, I a grateful this is being implimented into a class.

I don't think so.

School: Polk Elementary School

District: Dearborn Heights Sch Dist 7

School: Polk Elementary School

I have never experienced another student coming into the classroom and presenting to the children. I think it was a great experience for both sides. I think that peer teaching is a wonderful idea!!! My students saw Krystal as a role model because she was so knowledgeable. It was wonderful!

No Change

It hasn't.

No

I will use more power point presentations with the students. They really enjoyed it! I had a good time working with the gen y students and would like to do so in the future. It showed me how intersted the students are in technology and how I need to integrate it into lessons more frequently. I know that they need to be ready for the technology age and I have to help prepare them.

District: Denali Boro School Distirct

School: Dublin Elementary School

My experience with GenY reinforced my positive expectation of working with high school students on meaningful projects.

It was not only useful for me as a teacher but also very useful to both the classroom students and James as a peer doing the teaching.

The students learn about technology so much faster than me. It was wonderful to have the high school students team up with the third grade students.

I am more aware of the ways in which students can be used to aid in teacher expertise and growth, while at the same time they are experiencing growth of their own.

Not really.

District: Drummond Area SD

School: Drummond Elementary School

It was marvelous working with my former first grader and to see his levels of development and expertise with this project. My students were very responsive to their project and wanted to view it over again.

District: Drummond Area SD

School: Drummond Elementary School

Even students in the third grade are quite capable of becoming comfortable working on the computer. The possibilities are endless.

I'm so glad these students are available. I don't have enough time to generate all of the ideas that I would like to use. Please keep them coming!!!

I feel that the students have acquired valuable knowledge and skill when it comes to technology as a result of GENY. I also think the students gained self confidence and poise throughout the program.

I am glad the school received the grant for geny. I loved teaching the class and enjoyed my partnership with the student.

District: Ferndale School District

School: Ferndale High School

Not really.

I am a computer technology teacher who integrates computers into the regular classroom. Therefore my thoughts haven't changed it just provided me with another resource to use.

I think Gen Y is a great way to integrate students and teachers in ways that do not normally happen in the everyday classroom.

has not

I know that students know a lot about computers, and that there is wide variety in what students can do already. Some know way more than I do and some have very little experience at all. I learned that students who do not have computers at home are having trouble learning as much about computers. They need more exposure to technology in their classes.

I enjoyed watching the students help each other. Having a Gen www.Y reminded me that the best teaching is giving a project and then being there as a mentor / coach.

Students enjoy the integration of technology into the class and even Physical Educational setting.

My thinking and feeling about students has not changed but my feelings and motivation towards integrating technology into my curriculum has been renewed.

District: Ferndale School District

School: Ferndale High School

a little

District: Grandview School District

School: A.H. Smith Elementary School

I am very impressed with the ability of some of our students and their computer knowledge.

I don't think it has changed to way I feel about school or students because I feel I am, and have always been, dedicated to my job and profession.

It made me realize how easily students grasp the use of technology and how enthusiastic they are about doing it.

I feel that it is a wonderful way for students to learn.

Students in the Gen Y classroom do much more than I expected. It is nice to see students do more than just word processor, draw, and paint.

I am already thinking about how I can use power point in other ways in my classroom next year.

The students were able to do a lot more than I expected. They were a lot more technologically equipped than I gave them credit for.

District: Hayward Community School District

School: Hayward Intern. School

I realize that I can take the stress off myself and let certain kids take more of a leadership role in helping kids with technology. I hope to use a lot more technology in my classroom.

Students are more capable of working with technology today than ever before. My students help me when I get stuck on my computer. Since kids do have this skill, I find some things I teach can be student taught, and students can become more independent learners because they have the knowledge to use the computer.

I don't think it has changed much. As I feel the use of computers is very important. This year I taught the students power point and I made a web search for the students. I used computers a lot in my classroom this year.

District: Hayward Community School District

School: Hayward Intern. School

i I have a greater appreciation of the help a student can be to me in the area of technology.

Since the generation y project, I have felt more comfortable letting students go on their own to complete projects and go beyond my abilities to guide them in completing projects. I know that I can trust them to find the things they need, even though I may not know how to find them.

It has helped me focus on technology and how quickly the student can pick the information up and use it.

District: Hurley School District

School: Hurley High School

I don't think that I have changed the way I think about the school or students per se. This was my first experience with the Gen Yes program and I certainly feel it is a worthwhile program. It has been a pleasure to work with my student partner. She was very reliable and responsible. We have a new tech literacy approach that is also helping all of the teachers integrate technology more into our curriculums with the use of laptop computers. So the Gen Y program is not all that we have but it is a pleasure to see students take the leadership role in presenting the

I don't think I have any changes in feelings or thoughts about school or students since nothing was really accomplished. I am disappointed in that my students did not get to see the finished project. It would have been great! I do hope my student partner will finish it at some point in time.

I don't think that I have changed how I think or fell about the school or students per se. We have a tech literacy program that is helping teachers integrate technology into our curriculum using laptop computers. Gen Yes is a great program in that it is good to see the students take leadership in presenting the lessons.

District: Kent School District

School: Sunrise Elementary School

I feel more comfortable using students to instruct and assist other students in completing technology activities. It's exciting to see how we can effectively work as a student/teacher team to effectively integrate technology with all subjects.

Feel stressed about computer lab, usually, because of so many questions at once, with being torn about whom to help. This makes me feel more comfortable--kids can show me, instead of the other way around.

It taught me how limiting I was being in the technology instruction I was providing to my kids. When the opportunity was presented, they were able to teach me a lot and take lessons farther than I otherwise might not have.

I have always supported students teaching others in my classroom. I am now confident that this opportunity should be available to more than one student in each class. Having a few students as teachers can vastly increase the rate in which the rest of the class learns.

This is a wonderful program. I enjoyed working with my partner as she was very kind and patient with me. I would like very much to participate in this program next year.

District: Kent School District

School: Sunrise Elementary School

I need to be more clear as to my personal time available to help with this kind of project... often a request for my time was offered in very short notice and so I wa unable to commit.

Gen Y is a powerful program that empowers the students by teaching the teachers. It also helps the teachers to better understand by having students explain it to them, we seem to be more patient with students teaching us! I can see the self-esteem and confidence levels greatly increase with each student and their projects.

I think it is a great program. It gives students a look at teaching and what all we have to know and do.

District: Mellen School District

School: Mellen School

I have always respected and felt highly of education and the involved students.

I have come to understand thattechnology can be used to create an attractive environment for leasrning. I am now aware of the possibility to make (electronic) lessons "interactive"

I can see that as they become more involved and take more ownership of their learning, they are much more willing to learn and make the connections.

District: Newton USD 373

School: Santa Fe Middle School

it reminded me about the importance of good communication when working on collaborative projects. Also the importance of scheduling meeting time well in advance.

In order to develop a Power Point presentation I had to pick out the key elements and points. This is an excellent way to have kids present projects. they will have to summarize key points and main ideas. The technology gets them excited about presenting the information in a different way.

I don't think it changes my thinking or feeling.

I like how the student worked so hard to complete the project and then did an outstanding job presenting the project to the class.

I had a really good experience with this project and the students enjoyed using the technology.

District: **Newton USD 373**

School: **Santa Fe Middle School**

It was good to work with a former student who was a helper, and a very capable one. I enjoyed this interaction.

I appreciated my Gen Y students's willingness to help create this project. He was patient and willing to work with my schedule.

District: **North Thurston School District**

School: **Meadows Elementary School**

I enjoy the "working together attitude."

It was nice to work with a student I would not ordinarily have worked with.

I love the fact that with Gen Y everyone is a teacher and everyone is a learner, regardless of assignment in the school setting.

My experience with Generation www.Y has changed my perception of what the "classroom" is. Students can use technology to "go out in the real world." My student partners have gone beyond my expectations as far as students being able to take on responsibility without teacher direction and students' being able to use technology and handle technology problems.

District: **Northwood School District**

School: **Northwood School**

The GenY project enabled a Special Ed. student to increase knowledge of computers, increase personal confidence and develop skills woking with an adult.

My experience with Generation www.y was very rewarding considering that my partner-student is in the special education program. It has also helped me to identify other ways to use the computer in my class.

I feel that the students can help everyone learn-teachers,peers, parents, etc.

This was an excellent experience for me. I have plans to expand this project further by including my students in the development.

No change.

District: Oak Harbor School District

School: North Whidby Middle School

Not really--I've always believed the students are great here at NWMS.

I don't think so.

I will expect to count on students to assist me with projects in the future--especially technology.

District: Olympia School District

School: McKinney Elementary School

I would not be able to use computers in the classroom as well if it were not for Gen Y. My partner student was an invaluable resource and so were former Gen Y students in my class. I could rely on them for assistance and this was a tremendous community-building experience for our entire class. I appreciate this program!

As a result of working with my genY partners, I can now do powerpoint. In fact, this experience has revolutionized my teaching. I plan to incorporate/create powerpoint instruction for any and all major units of instruction next year.

I'm still happy about empowering student learning.

This is an exciting way to empower student learning. Using computers has increased my students interest in academics. Hurray for Generation www.Y!

In the beginning of this project I felt overwhelmed by the nature of this project. I had not ever tried anything like it. I was nervous! Now I am excited! I am looking forward to being able to learn more about building and maintaining this website. Drew was an amazing resource. He allowed me to believe that we could actually do this project together. I am proud of the outcome and have a lot of respect for the work that Drew and Ms. Barre put into this project.

My GenY experience has been wonderful! It has been a great way to connect with older students as well as improve student learning in Kindergarten.

I am happy to rely upon students to mentor other students in my class.

I feel as if it is more manageable with younger students, than I thought possible. Students are inspired and interested in using technology as a way to present learning.

The prospect of a successful GenY project is still exciting to me, even though this year was a struggle due to the particular GenY student. I look forward to projects in the future, and have a better grasp of what projects can look like and how they can help me in my teaching.

District: Olympia School District

School: McKinnev Elementary School

It's amazing what these students can do using technology these days. It helps me because they are more skilled in this area than myself.

School: Pioneer Elementary School

I realized that students who take the time and effort can grow immensely in their technology skills. I have always felt strongly about the use of technology at school. GenY has helped to encourage more classroom computer use in the future.

I have had a positive experience about it all along.

It's always a learning experience to be in the student seat and watching kids be the teachers.

District: Park Falls School District

School: Lincoln Jr. High School (Park Falls)

The realization that the computer age is upon us and it should be incorporated in all phases of education.

I feel that it shows what students can do if they are challenged, not to limit them and let them go above and beyond what is expected.

I am impressed by how hard the kids worked on their project. It's neat to see them take so much ownership in the project.

I am not uncomfortable to try something new with students. If it goes wrong, we just modify it and move on. It's a great learning experience for all of us.

This was a positive experience for all involved. It allowed for both the teacher and student to work together and meet a common goal. The students felt ownership in the project.

No, I have always felt students are a valuable resource especially in terms of technology. Students have helped me troubleshoot computer problems more times than I can count. Gen Y gave me a formal opportunity to do many of the things I have done in the past.

District: Phillips School District

School: Phillips Middle School

District: Phillips School District

School: Phillips Middle School

No.

No.

District: Private Schools (St. Thomas/St. John)

School: Prophecy Elementary School

There is no doubt in my mind that this program has benefited my school and its students. I hope to see more kids get involved in the program not only for the present but for their future.

It has changed a little.

Students can achieve great things, given the proper tools to work with. The school has been very supportive.

District: Solon Springs School District

School: Solon Springs School

No

It really hasn't. It just reinforced my belief that students may not just be effective learners, but also effective teachers. I was disappointed, however, that I was not able to witness and learn the actual construction process of the power point lesson. This was due to time constraints. I hope to learn next year.

It is nice to have a student be able to help in implementing technology - especially considering the time that had to be put in to complete the project.

No

I still feel very lucky to love my job as much as I do after 16 years in the trenches! There aren't too many people with too many jobs who can attest to that.

District: South Brown County 430

School: Everest Middle School

District: South Brown County 430

School: Everest Middle School

Because of this teaching/learning experience I feel very comfortable about working with the students in this area.

Gen Y has encouraged me to consider the possibility of using technology more in my classroom. I believe my students enjoy the change in presentation form and are able to get more out of the content in which they are to learn.

I was very surprised at the knowledge of the Gen Y students and the ease in which they were able to accomplish the tasks given to them.

It did not change how I think or feel about school and students it increased my knowledge of software I had not had time to learn.

It has helped me understand the various options with regards to technology that is available to me.

Illustrated that students can be a part of the presentation of new material process.

I think this was a great way to get to know and work with students in regular education. Since I am a special education teacher, I do not get that opportunity very often.

I think our students that are in the Gen Y program are very knowledgeable and a great resource for me. It is neat to see the students and teachers working together for a common goal.

Jay's product was not the greatest but I like the idea of the GenY class.

It allowed me to see that students learn more about the subject if they can teach it to others.

Anytime you challenge yourself, and model this for students it is always positive.

I would take a GenY student every semester if they worked like Chelsie. It was a very positive experience.

District: South Brown County 430

School: Everest Middle School

Allows my students to become a larger part in the presentation of new material.

preparing classes and presenting lessons

District: Vallivue School District

School: Vallivue High School

The Gen y students are helpful to teachers in putting together lessons which integrate education and technology in the classroom. I appreciate the help of the students in laying the ground-work for developing the project for the students.

We have some students who are very computer capable and are helpful to teachers in the classroom in developing class projects. I appreciate their input--it certainly makes my job run more efficiently.

I am confident in my ability to use computers and other technologies in my classroom. I design my own experiences and web pages for my students. Other than the time needed to accomplish things, I don't see the purpose of Gen Y. I have TAs who can do the same things.

Appreciate the work students do to help teachers who don't have the technology knowledge or don't have the time to use it.

It hasn't changed my thinking. I see the value of having assignments available on the web.

School: Vallivue Middle School

Students are more readily able to learn programs and the terminology that gives me trouble. They are able to explain these areas in a manner I can understand.

I appreciated having the students help us learn useful technology during our April teach in-service day. This was a great idea for using the students to help more teachers. I have been able to partner with one student as well as learn from others during the three in-service classes I took.

I think it is a great way to get teachers and students to work together.

I feel that it was a wonderful experience for our school to be a part of the Gen Y process.

District: Vallivue School District

School: Vallivue Middle School

I think it is awesome to involve students in the GenY!

I love the Gen Y model. I think students are such powerful tool to help teaching. I feel like Gen Y has taught me, that my role as a middle school teacher is as a facilitator rather than the teacher lecturing in front of the class.

It really hasn't changed any of my feelings.

I can make many more decisions on teaching strategies and incorporating technology in my classes, because my students are more willing to help me out. I now can tell them that I want to teach..., but I do not know how to do..., then my students wil help to assist me.

My experience with Generation Y has not changed the way I think or feel about school and students. It reinforces the idea that high expectations will result in high quality work.

This puts a more positive spin on education.

I always enjoy working with students. This program gives me more one-on-one student contact where the student is the teacher. I really enjoyed spending time with Jennifer. Thanks for the opportunity. -- Rod Lowe, Principal

This experience showed me the increasing capability the students have with technology. It is no longer doing "fun n games", but it is using technology for practical applications. This project also makes teachers aware of the technology thatis available to the students for projects that will be assigned in the future.

I now feel student are very capable of building/maintaing web pages.

The program offers students an invaluable opportunity to prove their abilities to operate the technology. Many students who are not in Gen Y ask students who are in the program for help. They can see a big difference in the Gen y students knowledge base. It is exciting to see students teaching students and of course teachers as well.

I really enjoyed working with the students. It is amazing how much the students were able to teach me.

I feel that students are very capable of setting up and maintaining a web page.

District: Vallivue School District

School: Vallivue Middle School

gen Y is a great program, because it gives teachers the opportunity to learn from students.

I have so enjoyed having a partner with Gen Y that I am now your next Gen Y teacher!

No noticable change

I feel that working with students creating lessons and presentations builds a strong bond for learning for all of us.

I am pleased to see another aspect of students abilities being utilized outside of G.T.

My feelings are about the same as before.

I wish this program was funded and supported in every school in the USA. It is so powerful. I believe it is a privilege to have the program in our school.

District: Washburn School District

School: Dupont Middle School

I believe student can be more responsible both for their own learning and for helping to teach technology integration in our school if we give them a chance and teach them the skills they need to do this.

District: West Linn - Wilsonville

School: Boones Ferry Elementary School

I have been working to integrate more technology into my teaching all year. GenY hasn't really changed that, but has been a way to keep me accountable for doing so. I would say GenY has not changed my thinking, but that I am supporting our students by participating in GenY with them.

It has really helped me to think of other projects and units that I could integrate more technology. I think have peer tutors or GenY teams buddy up with younger skilled learners would be a wonderful help!!

I have been working to itegrate more technology into my teaching all year. GenY hasn't really changed that, but has been a way to keep me accountable for doing so. I would say GenY has not changed my thinking, but that I am supporting our students by participating in GenY with them.

District: West Linn - Wilsonville

School: Boones Ferry Elementary School

I was amazed at the knowledge my Gen Y student has about computers. I was amazed with the ease he seemed to have with putting the Web Site together. It made me realize that putting together a Web Site is not as hard as I first thought, and that it is a great way to share information about what we are doing in the classroom

I re-affirmed my belief that more technology should be integrated in the classrooms.

I have been extremely impressed by the level of proficiency with which Alex has conducted her computer activities in Gen Y. She is very comfortable with the computer and knows how to deal with certain obstacles that arise. From watching her, I have realized that students of this generation are growing up with computer knowledge and will run with anything you introduce them to.

I am very excited to have another way to post student work (Website). Also, I am very impressed with the leadership role that the GenY students have taken through this project. I feel like I can turn this project over to them and it will be completed. Furthermore, I have several ideas for how I can use my GenY students as experts next year!

This project pushed me to broaden my thinking in how I can use technology in my teaching.

It was impressive to me to see the Generation WWW.Y student's ability to use technology. These students were so computer literate and competent.

District: White Pass School District

School: Glenoma Elementary School

Even though I feel it is a valuable program for my students, it did not change my attitude toward school and students.

District: Winter School District

School: Winter School

My students realized that the way that they think they look and sound is totally different from what the tape showed. It helped realize that how they are perceived by others is important.

when given the opportunity, students crave involvement, leadership and praise. students can be a component of curriculum delivery that enriches and intergrates learning styles and expertise not readily seen.

I think using more technology in the classroom could really help with motivating students, because I could see the level of interest they had when the computers were involved. Considering how much technology is used in the world I feel it is really important to get students using computers and finding out how much they can do with them.

Students are eager to learn when computers/equipment is involved.

District: Winter School District

School: Winter School

My students really learned a lot about e-mail and as a matter of fact so did I. It was a great learning experience for everyone involved.
